No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1986 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

EDITORIAL

PETER N. KELIHER. A Progress Report and Thank You Notes 1

REGULAR ARTICLES

F. CARRILLO, M. BONILLA, AND C. CÁMARA. Determination of Mercury in Biological Samples by a Sensitized Cold Vapor Atomic Absorption Technique 2

V. H. HARTOFYLAX, C. E. EFSTATHIOU, AND T. P. HADJIIOANNOU. Kinetic Study of the Tartaric Acid–Periodate Reaction: Determination of Tartaric Acid Using an Improved Periodate-Selective Electrode 9

V. H. HARTOFYLAX, C. E. EFSTATHIOU, AND T. P. HADJIIOANNOU. Kinetic Determination of Iron(II) and of Some α-Hydroxyacids Based on the Accelerating Action of Iron(II) and Hexacyanoferrate(II) on the α-Hydroxyacid–Periodate Reactions 18

ABDULHAMEED A. R. LAILA AND NEIL S. ISAACS. A Novel Analytical Procedure for Atmospheric Sulfur Dioxide Based on 1,3-Diene Entrainment 25

S. A. ABOU-TALEB. Microdetermination of Metals in Organometallic Compounds by the Oxine Method after Oxygen Flask Combustion. V. Europium, Gadolinium, Gallium, and Indium 29

MOUAYED Q. AL-ABACHI. Indirect Spectrophotometric Microdetermination of Sulfur in Organic Compounds Using 1,5-Diphenylcarbazide 34

J. G. MARCH, R. FORTEZA, AND F. GRASES. Determination of Molybdenum in Rat Organs by Extraction and Atomic Spectrophotometry: Study of the Influence of Anthocyanes in the Distribution of Mo(VI) 39

LIH-FEN CHANG, MASATADA SATAKE, TOORU KUWAMOTO, AND B. K. PURI. Spectrophotometric Determination of Iron(II) after Separation by Extraction of Its Ternary Complex with 1,10-Phenanthroline and Tetraphenylborate into Molten Naphthalene . . 46

ADELA BERMEJO-BARRERA, M^{a} MANUELA GUISASOLA-ESCUDERO, AND F. BERMEJO-MARTINEZ. Spectrophotometric Determination of Copper with EDTA and NTA by Derivative Spectrometry 52

P. C. GRITZAPIS, E. P. DIAMANDIS, AND T. P. HADJIIOANNOU. Determination of the Second Ionization Constant of 3,5-Dinitrosalicylic Acid ($DNSH_2$) and the Instability Constant of $[DNSFe]^{+}$ and Titrimetric Determination of Thiourea with a 3,5-Dinitrosalicylate-Selective Electrode 62

F. F. GAÁL, A. S. TOPALOV, AND ZS. J. VITÉZ. Catalytic Thermometric Titrations of the Content of Some Sulfonamides 71

D. AMIN AND W. A. BASHIR. Spectrophotometric Determination of α-Naphthol, β-Naphthol, and Oxine in Aqueous Solution 78

TERESA KOWALSKA. A Thermodynamic Interpretation of the Behavior of α,ω-Alkanediols and the Aliphatic Diacids on Chromatographic Paper 81

J. BAREK. Destruction of Carcinogens in Laboratory Wastes. II. Destruction of 3,3′-Dichlorobenzidine, 3,3′-Diaminobenzidine, 1-Naphthylamine, 2-Naphthylamine, and 2,4-Diaminotoluene by Permanganate 97

J. BAREK, A. BERKA, AND M. MÜLLER. Destruction of Carcinogens in Laboratory Wastes. III. Destruction of 4-Aminobiphenyl, 4-Nitrobiphenyl, and 4,4′-Methylene-bis-(*o*-chloroaniline) by Permanganate 102

CHANG-YI WANG AND YA-DONG ZHANG. Boron Tetrafluoride Ion-Selective Electrode for Microdetermination of Organic Sulfur in the Presence of Phosphorus 106

S. T. SULAIMAN AND I. J. AL-NURI. Coulometric Microdetermination of Nitrite via Diazotization of 1-Amino-4-naphthalenesulfonic Acid 112

Y. A. GAWARGIOUS, AMIR BESADA, AND M. E. M. HASSOUNA. Micro and Submicro Iodometric Determination of Triphenylphosphine, Triphenylarsine, and Triphenylstibine by Amplification Reactions 116

F. M. EL-SAMMAN AND D. AMIN. Titrimetric Determination of Aminobenzoic Acids via Iodination 123

Y. M. Issa and M. Zaky. Use of Hydrazine Reduction in Potentiometric Determination of Gold: Analysis of Mixtures 126
Letter to the Editor
K. L. Cheng. Some Comments on the Relationship of pH and Potential 132
Book Reviews

INFORMATION FOR AUTHORS

The MICROCHEMICAL JOURNAL will invite research papers on all phases of chemistry, including clinical and biochemical, which involve small-scale manipulation. This will include both organic and inorganic work on preparation, purification, separation, detection, determination, trace analysis, and all types of instrumentation.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved of the citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Microchemical Journal* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted to **Dr. Peter N. Keliher, Chemistry Department, Villanova University, Villanova, Pennsylvania 19085.** Manuscripts in the area of Bioanalytical Chemistry should be submitted to **Dr. Paul Hemmes, Miles Laboratories, Ames Division 18-C-1, Post Office Box 70, Elkhart, Indiana 46515.**

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. American spelling conventions should be used. At least two copies should be submitted, each copy to include all figures and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), and address to which proof should be mailed. Please number all pages of manuscript.

Authors are encouraged to use descriptive subheadings in this order: Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments, and References. Every article should have a definitive title. The use of series numbering is strongly discouraged.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described: if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Units of weight, measures, etc. when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 g, 8 cm, 5 μg, 3μl).

Names of compounds should agree with those presently in use by Chemical Abstracts.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced.

All figures and illustrations are to be submitted in such form as to permit photographic reproduction without retouching or redrawing. This includes the lettering which is reproduced as part of the photoreproduction and is not set in type. (Lettering should be done with a lettering device, such as a Leroy.) Line drawings should be carefully drafted with black India ink on white drawing paper or blue drafting cloth, no larger than 8.5 × 11.5 inches (21 × 27.5 cm). The lettering should be large enough so that when reduced by two-thirds it will still be legible. High quality glossy prints are acceptable. Xerox prints are not acceptable. Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet: in tables, by superscript letters and placed at bottom of page containing table.

References should be arranged alphabetically and numbered in the list in sequence. The text cita-

tions may then consist of either just the italic number of the reference enclosed in parentheses and set on the text line or of the name (or names) of the author(s) followed by the italic number enclosed in parentheses. In the text citation, if there are more than two authors of a given reference use the surname of the first author followed by "*et al.*," "and co-workers," or "and associates." All authors' names should be included in the reference list itself.

For abbreviations of journal titles in the reference list please follow the forms used in *Chemical Abstracts Service Source Index,* 1980.

Pattern styling, punctuation, and capitalization after these examples, noting the particular style for journal articles, books, and edited (multi-author) books.

1. Stevens, P., and Hong D., The role of myeloperoxidase and superoxide anion in the luminol- and lucigenin-dependent chemiluminescence of human neutrophils. *Microchem. J.* **30,** 135–146 (1984).

2. Allen, R. C., Biochemiexcitation: Chemiluminescence and the study of biological oxygenation reactions. *In* "Chemical and Biological Generation of Excited States" (W. Adam and G. Alento, eds.), Academic Press, New York, 1982.

3. Vanasse, G. A., "Spectrometric Techniques," Vol. 3. Academic Press, New York, 1984.

The use of "personal communication" and "unpublished observations" as citations in the text should be avoided.

Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article will be provided free of charge.
